

Super Vision LPR

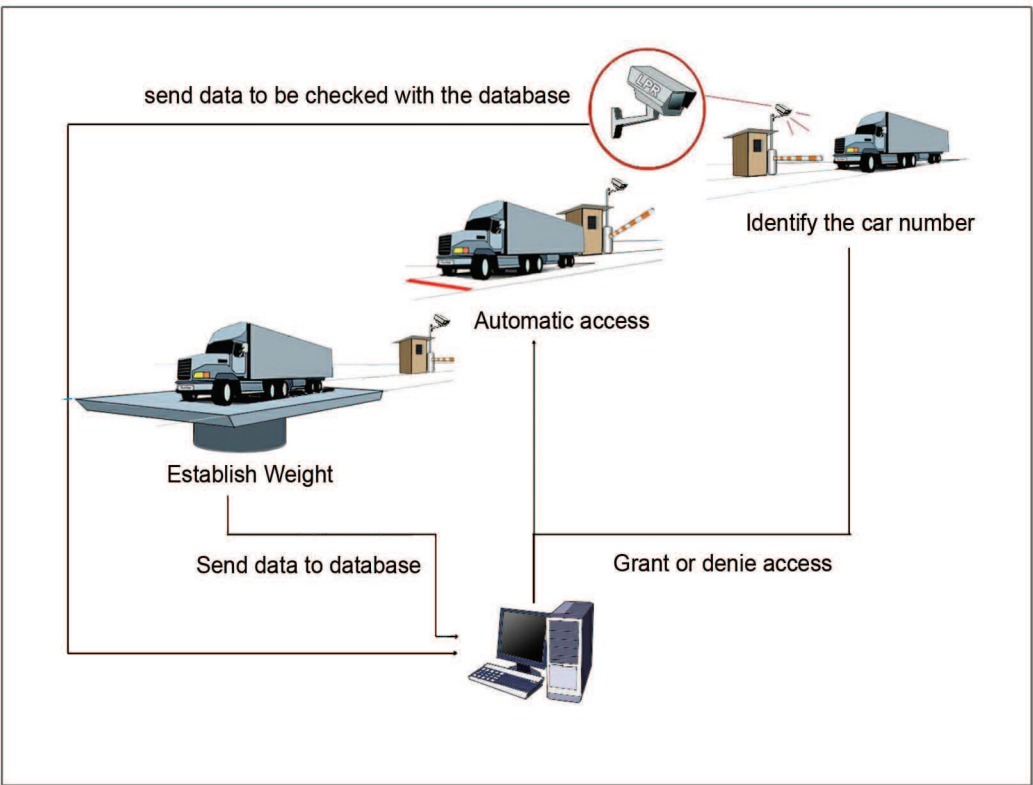

Surveillance and Monitoring for Logistic

Does your activity suppose traffic and merchandise conveyed in transit checking!? You come up against difficulties because you are using a simple solution and it appear discussions about "missing" materials, or you are using a "impenetrable" solution but the time is not enough anymore...

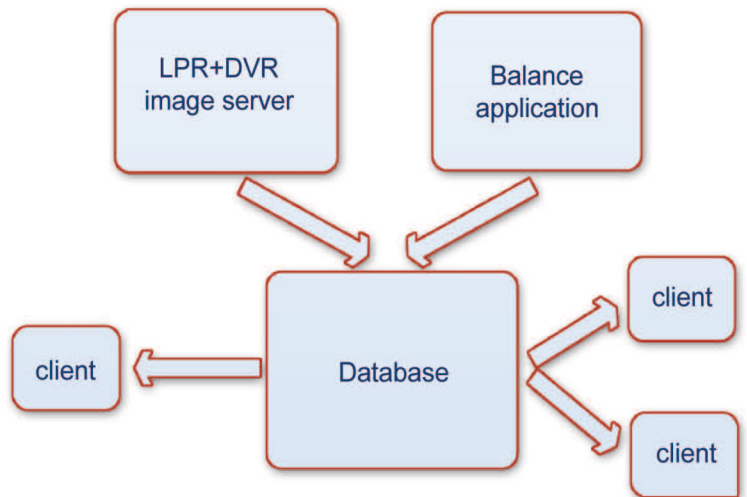

Super Vision LPR for Logistic offers the necessary control, the friability and the speed operation that you need it so bad.

Softrust Computers Solution allows you complete control by associate the weight with car number, weigh terms, exact time moment, the driver and, if it's possible, the official in charge:

- automatic car number recognition
- iinter-connect with the balance and communicated the data files from it
- iimposing the balancing conditions (for example: the driver may leave the vehicle; signal from sensors to correct framing on the balance, not offside his borders; vehicle number recognized or inserted by user; the weight type – with or without loaded, etc.)
- the possibility to associate at the event the video images from supervision cameras for watching the cabin and auto bucket
- the possibility of inter-connect to access control solution having proximity card

The security solution market is growing in Romania and into the world. The owner of a original software product and of one complete technical solution for surveillance and video data processing enjoy many advantages, one of them being the possibility of re-dialing the product, of adding new facilities, of transform the available facilities.

Beside different hardware configurations (calculus speed, the store capacity, the graphic piece, double this to increase the reliability, etc.) and software versions, you can obtain proper solutions for all kind of request.

The comparisons between the performances of our products and similar ones, proves that the Super Vision line is well prepared for the Romanian and international concurrent market.
